

# Tutorial

The easiest way to get started with FlockOS development is to go through the following video series on creating a Flock app from scratch. The app allows you to setup alarms in Flock, similar to the Reminders app.

The series is divided into seven parts, listed below:

- [Introduction](#)
- [App Creation and Installation](#)
- [Slash Command](#)
- [Sending Messages](#)
- [App Launcher](#)
- [Message Action Button](#)
- [Conclusion](#)

The source code for the app is available on [Github](#).
