

channels.removeMembers

This method allows removing members from a given channel. The user removing the members must be a member of the channel and must have permission to modify the member list.

The method endpoint is <https://api.flock.co/v1/channels.removeMembers> and follows the method calling conventions.

Parameters

Name	Type	Required	Description
token	String	Yes	Authentication token of the user
channelId	String	Yes	Id of the channel
members	Array	Yes	An array of user ids that will be removed from the channel

Response

An object where the keys are user ids of members that were removed and the values are `ChannelMemberStatus` objects, indicating whether the members were successfully removed or not.

Example

```
{
  "members": {
    "u:<id1>": { "status": "removed" },
    "u:<id2>": { "status": "failed", "error": "UserNotFound" }
  }
}
```
