

Integrations

FlockOS Integrations allow apps to extend Flock clients in many interesting ways.

- [Slash Commands](#) allow users to send text based commands to your app
- Use an [attachment picker](#) to make it easy to send messages with [attachments](#).
- [Launcher Buttons](#) and [Chat Tab Buttons](#) are typically used to create a sidebar [widget](#), but you can use them in other ways too.
- Or give a sneak peak of URLs shared by users using [URL Preview](#).
